1: Holmberg--48 (1941-42) 1950 Siriono
116, 804

"Since trade and commerce are completely foreign to the Siriono, they employ no weights or measures. The size of pots, the length of bows and arrows, etc., are determined entirely by guess. The length of a hammock, of course, is roughly determined by the height of the person who will use it, but no tools of any kind are employed in measurement. The same may be said for measurements of distance, which is merely expressed in terms of far (íšo) and near (aiíti) with the addition of gestures. With respect to distance, the Indians sometimes employ such vague references as one, two three, or many 'sleeps', i.e., days away on foot."
